EXECUTIVE SUMMARY

Healthcare Analytics and AI leader with 10+ years driving digital transformation across \$100M+ business units. Builds enterprise data architecture, self-service BI platforms, and applied AI/automation programs that turn fragmented clinical and operational data into governed, decision-ready intelligence. Track record of leading and developing analytics teams through complex EMR migrations, enterprise-wide AI adoption, and data governance overhauls that translate directly into financial, operational, and patient-outcome results.

CORE COMPETENCIES

Leadership & Strategy: Team Management & Development, Analytics & BI Transformation, AI/GenAI Strategy & Adoption, Change Management, Stakeholder Engagement, Hiring & Talent Evaluation, Business Process Optimization

TECHNICAL SKILLS

- Languages & Databases:** SQL (T-SQL/Netezza), Python
- BI & Analytics Platforms:** Alteryx (Designer & Server), Tableau (Desktop & Server), Palantir Foundry (Ontology, Pipeline Builder)
- Healthcare Systems & Interoperability:** EPIC EHR, HL7, FHIR, EDI, API Integration & Data Connectivity, EMR/EHR System Integration
- Data Architecture & Governance:** Enterprise Data Warehouse (EDW) Architecture, Database Structures & Optimization, Data Quality & Governance, Data Mining, Semantic Modeling, Regulatory Compliance (HIPAA)
- Automation & AI:** ETL & Data Pipeline Automation, Robotic Process Automation (RPA), Statistical Analysis & Predictive Modeling, Quantitative Research, Applied AI (Agent Creation, LLM Prompting, Enterprise AI Testing)
- Productivity & Collaboration:** Salesforce, VisualCron, SharePoint, Microsoft Power Automate, Microsoft Visual Studio, Microsoft Office Suite, Jira, Confluence

PROFESSIONAL EXPERIENCE

DaVita Kidney Care | Denver, CO

January 2020 – Present

Technical Manager, Analytics & BI, Revenue Operations (ROPS)

September 2024 – Present

- Direct an enterprise-wide, product-focused analytics modernization initiative supporting a **\$13.6B revenue cycle across 2,670+ domestic clinics**, running **4 concurrent cross-functional teams** of front-end, back-end, partner, and analyst teammates conducting discovery, data dictionaries, and dashboard wireframing by domain and subdomain.
- Own the initiative's strategy and design, directing project teams and the dashboard development team to retire **500+ legacy reports** for workbook suites built on prescriptive analytics, projected to save **\$300K to \$540K annually** in labor costs, free dozens of analysts for higher-value work, and lay the groundwork for a company-wide data catalog and future AI capabilities.
- Standardized enterprise data dictionaries and reporting logic, cutting technical onboarding time for new analysts from **180 days to 4 weeks** while meeting strict internal audit compliance standards.
- Designed the knowledge architecture behind the Excelsior Knowledge Hub AI assistant, writing governed system prompts and driving enterprise adoption of AI-enabled automation for post-discovery code generation under internal data security protocols.
- Directed operations and capability development for Team Excelsior (**8 analysts**), building formal technical evaluation frameworks, structured engineering pipelines, and DaVita-branded enablement materials that raised data literacy among non-technical leadership.

Technical Manager, Nephrology Practice Solutions (NPS)

August 2022 – September 2024

- Led a BI team of **5 (2 developers, 3 analysts)**, owning the full data infrastructure for a national healthcare provider.
- Directed the Athena-to-EPIC billing migration, mapping and validating **120 critical financial and clinical tables** and achieving **99.9% reporting uptime** during cutover, with zero disruption to a **\$150M+ revenue cycle across 60+ managed practices**.
- Connected EPIC to downstream reporting and operational systems through custom API integrations and HL7 data feeds, strengthening interoperability across the enterprise data infrastructure.
- Built a company-wide data governance framework with new validation processes, restoring cross-departmental trust in reporting and improving data quality.
- Consolidated **50+ disparate standalone reports** into **4 comprehensive BI products**, cutting server maintenance overhead by **30%** and lifting executive daily active usage by **60%** through standardized data governance.
- Introduced dynamic ETL pipelines and RPA protocols to eliminate manual data entry across Revenue Cycle Management (RCM) workflows, automating **35 weekly operational reports**, cutting month-end close time by **80%**, and reclaiming roughly **1,500 analyst hours annually** for advanced analytics.
- Built a collaborative, improvement-focused team culture centered on knowledge sharing and continuous process refinement.

Senior Business Intelligence Developer, NPS

January 2022 – August 2022

- Designed BI models linking clinical quality metrics to physician compensation across **60+ practices**, calculating payouts for a **\$5M+ incentive pool** and directly driving a **12% improvement** in target patient outcomes.

- Developed and managed compliant reporting for multiple federal value-based care programs (Kidney Care First, Comprehensive Kidney Care Contracting), driving a **15% increase** in targeted reimbursements.
- Built automated parsing and processing for HL7 and EDI data feeds into value-based care program reporting, avoiding **\$250K in vendor implementation costs and \$25K in annual maintenance** while improving the accuracy and completeness of federal compliance metrics.
- Automated the annual SOURCE Fellows Tracker, converting a manual process that previously consumed **640 total analyst hours (4 analysts over 4 months)** into a fully automated solution requiring **less than 5 minutes** of runtime.
- Built self-service BI environments that reduced ad hoc reporting ticket volume by **45%**, reclaiming approximately **20 analyst hours per week** for advanced analytics projects.
- Introduced predictive analytics methods to strengthen long-term forecasting and data-driven decision-making.

Business Intelligence Developer, NPS

January 2021 – January 2022

- Rebuilt the NPS data infrastructure end to end, migrating from a static EDW to a flexible Alteryx environment, reducing ETL development life cycles by **60%** and eliminating **\$120,000** in legacy database licensing and maintenance costs.
- Led enterprise-wide Tableau training, raising data literacy and self-service BI adoption across non-technical teams.
- Designed prescriptive analytics solutions for the billing department and provider network, including drive-time optimization for provider routing and an Accounts Receivable (AR) scoring model that reduced Days in AR (DAR) by **12%**, accelerating roughly **\$2.5M** in cash collections.
- Phased out outdated data sources and redundant reports, simplifying pipelines and improving system performance.

Senior Business Intelligence Analyst, NPS

January 2020 – January 2021

- Spearheaded the architectural design and implementation of the foundational NPS data warehouse, centralizing **500M+ rows** of clinical and financial data and reducing average query runtimes from minutes to under **5 seconds**.
- Designed scalable big data storage solutions and optimized ETL blending, processing **2TB+ of monthly healthcare data** with a **99.8% automated pipeline success rate** and removing nearly all daily manual intervention.
- Researched and deployed new BI tools, improving analytics performance while maintaining full documentation for long-term scalability.

Freed Maxick CPAs, P.C. | Buffalo, NY

May 2017 – October 2019

Senior Business Intelligence Consultant

- Designed and implemented custom BI solutions for post-acute care facilities, hospital networks, physician practices, and non-medical clients, improving financial and operational decision-making.
- Integrated APIs and parsed complex EDI (835/837) feeds processing **over 1M+ monthly transactions**, serving as core components of analytics products sold to healthcare clients, standardizing EMR ingestion and generating **over \$300K in direct revenue**.
- Led full BI project lifecycles, from requirements gathering and solution design through ETL development, dashboard creation, and post-deployment support.
- Built real-time patient-level cost allocation models using Relative Value Units (RVUs) against **\$50M+ in gross charges**, providing healthcare clients with granular, service-level financial insight into operational costs.
- Designed and deployed a cash-tracking application for front-line collectors managing **\$5M+ in monthly cash flow**, enabling real-time payment tracking and reducing end-of-day remittance reconciliation discrepancies by **95%**.
- Conducted data validation across clinical and financial datasets, identifying discrepancies and refining pipelines to improve accuracy.

Anthem Blue Cross Blue Shield | Denver, CO

November 2011 – June 2015

Process Improvement Coordinator

- Conducted workflow assessments to identify inefficiencies and streamline operations, improving overall productivity.
- Supported deployment and post-launch administration of Salesforce.com and VisNetic Email Management, ensuring smooth integration and user adoption.
- Partnered with cross-functional teams to gather, document, and validate business and system requirements, supporting data-driven decisions.
- Redesigned and maintained SharePoint-based knowledge systems, including a team library, staffing calendar, training workspaces, and issue tracking, to improve accessibility and collaboration.
- Analyzed business performance metrics to uncover trends, remove process bottlenecks, and drive operational improvements.
- Developed and delivered training on system implementations, HIPAA compliance, and process changes to support smooth transitions.

EDUCATION

B.S., Accounting | State University of New York, Plattsburgh, NY

Cumulative GPA: 3.9/4.0 | Summa Cum Laude

Awards: NYSCPA FAE Excellence in Accounting Scholarship; The Roy L. and Beatrice R. Johnson Scholarship for Academic Performance
